Personalizing Care using Genomics – Opportunities and Challenges

Robb Rowley, M.D.

24 June 2021
1155 - 1255 ET

Presenter

Robb Rowley, M.D.

Program Director, Electronic Medical Records and Genomics (eMERGE), Division of Genomic Medicine, National Human Genome Research Institute, National Institutes of Health (NIH)
Bethesda, Md.

Robb Rowley, M.D.

Dr. Robb Rowley is an Internal Medicine Physician and is the newly appointed Program Director for the National Human Genome Research Institute (NHGRI) Electronic Medical Records and Genomics (eMERGE) Network. The national Network combines DNA biorepositories with electronic medical record (EMR) systems for large scale, high-throughput genetic research in support of implementing genomic medicine.

Prior to starting at NHGRI, he spent thirteen years in private practice and hospital management, where he provided clinical assessments and medical care for adult diseases influenced by genetically influenced conditions to improve patient risk stratification and individualize treatments. Dr. Rowley previously served in the United States Air Force Surgeon General's Office in Washington DC as the Chief of Medical Bioinformatics and Genomics. During this time, he established genomic policy and conducted genomic research for the United States Air Force. Dr. Rowley has also been instrumental in establishing national and international plans and policies for incorporating genomics into biosurveillance systems and biotechnology for the Department of Defense (DoD) and North American Trade Organization (NATO). Dr. Rowley has experience with managing multiple Food and Drug Administration (FDA) clinical trials, along with presenting original research at international scientific and medical meetings.

Disclosures

- Dr. Rowley has no relevant financial or non-financial relationships to disclose relating to the content of this activity.
- The views expressed in this presentation are those of the author and do not necessarily reflect the official policy or position of the Department of Defense, nor the U.S. Government.
- This continuing education activity is managed and accredited by the Defense Health Agency, J-7, Continuing Education Program Office (DHA, J-7, CEPO). DHA, J-7, CEPO and all accrediting organizations do not support or endorse any product or service mentioned in this activity.
- DHA, J-7, CEPO staff, as well as activity planners and reviewers have no relevant financial or non-financial interest to disclose.
- Commercial support was not received for this activity.

Learning Objectives

At the end of the presentation, participants will be able to:

1. Describe genomic medicine opportunities and challenges.
2. Explain how genomics can be used for clinical care: assessing risk, pharmacogenomics, undiagnosed disease, and somatic variation.
3. Summarize emerging concepts in genomics and how clinicians are needed for implementation.

DoD demonstrates value of genomic medicine

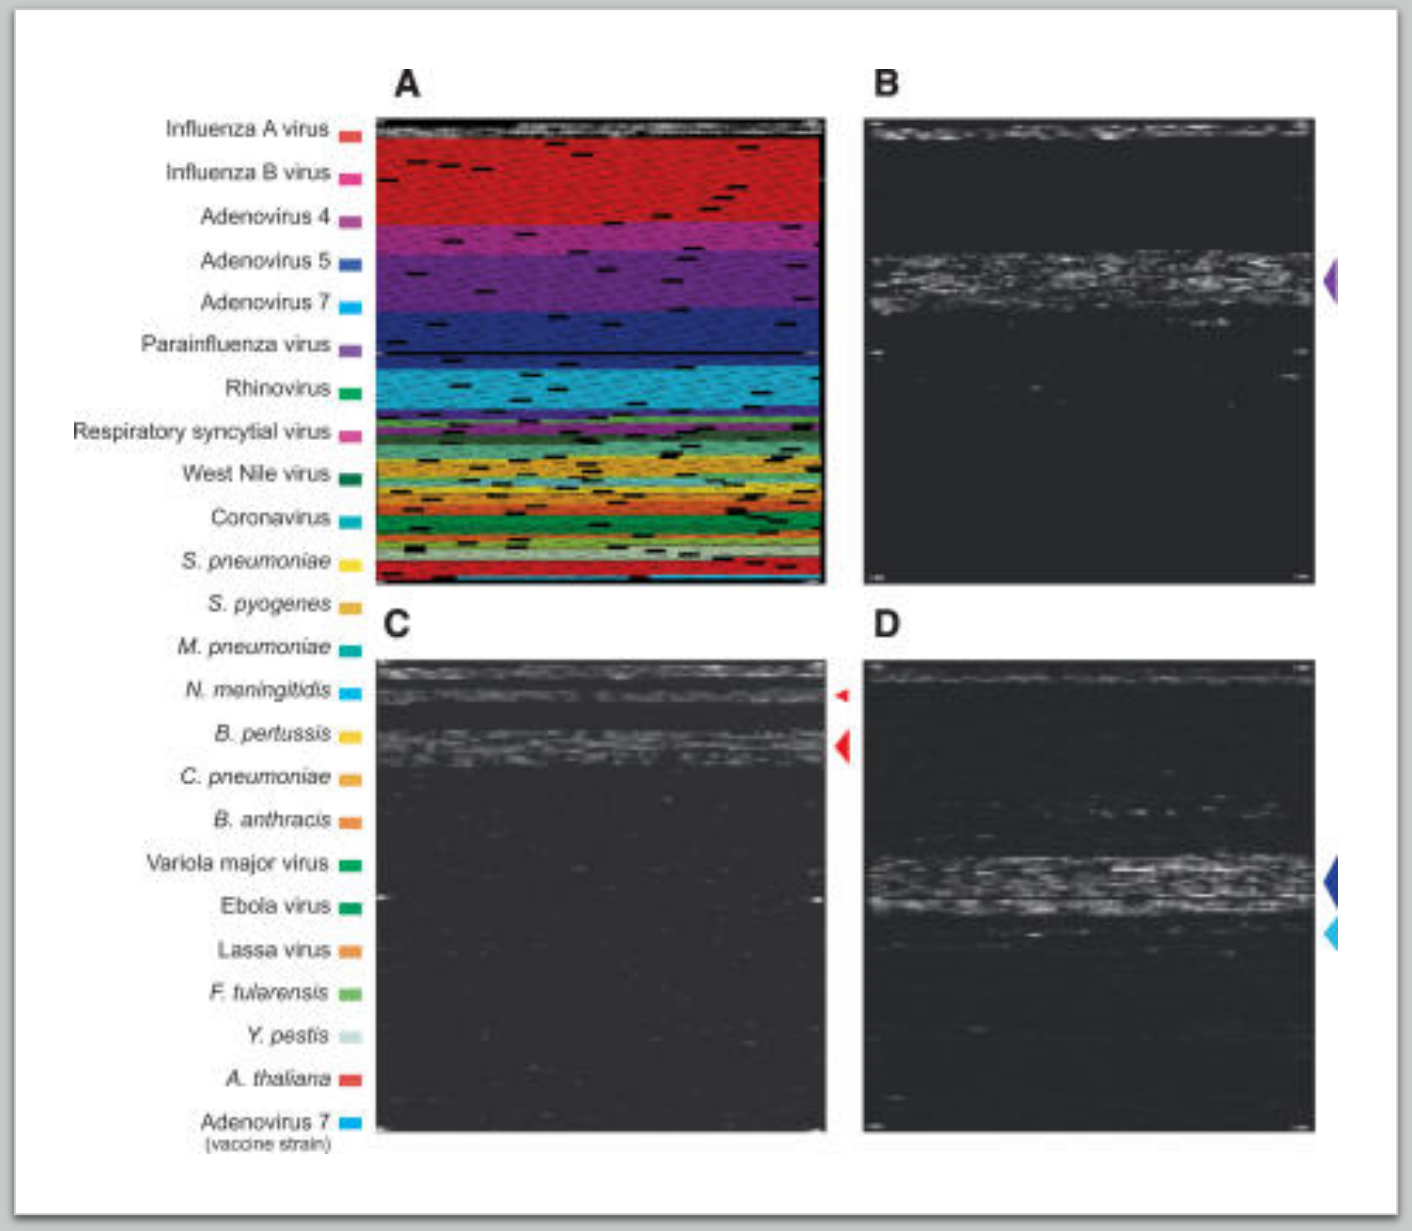
DoD at the forefront of Genomic Medicine

- In 1999 basic trainees had “flu-like” symptoms with loss of Adenovirus vaccine
- Recognized that many pathogens present with these symptoms
  - Adenovirus, Influenza, Anthrax, SARS, coronavirus…
- Understood the limitations of current approach of suspect and test
- Limited ability to monitor and track pathogens

Tackling Challenge

- 2001 DoD started the epidemic outbreak surveillance program
- Developed and validated a microarray to identify 100's of strains of pathogens at the sequence level in a single test
- Allowed the tracking and monitoring of pathogens by digitizing biology
- Conducted a genomic medicine clinical trial



https://Wikipedia.com

NIH NHGRI

Tackling Challenge

Table 1. Pathogens identified for 424 matched specimens-overall microarray vs. reference methods.

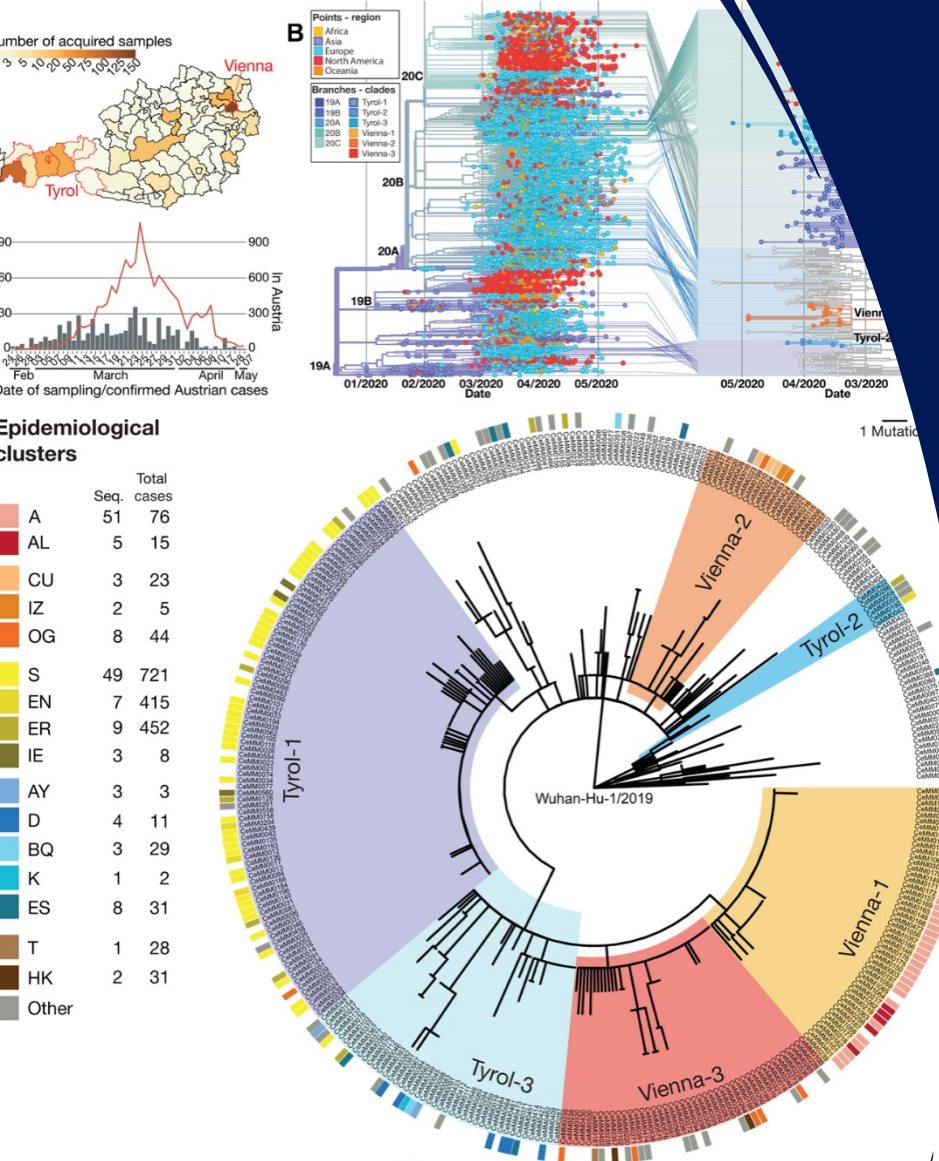
Organism	Culture (+)	Ref© (+)	RPM v.1 (+)	Ref© (+), RPM v.1 (−)	Ref© (−), RPM v.1 (+)
Adenovirus	2	8	9	0	1
Coronavirus	28*	29	24	6	2
Influenza A	176	263	269	1	7
Influenza B	28	41	46	1	6
PIV 1	0	0	1	0	1
PIV3	0	0	2	0	2
Rhinovirus	0	1	2	1	1
M. pneumoniae	0	2	3	0	1
S. pneumoniae	8	40	38	3	1
S. pyogenes	9	13	13	0	0
Negative	176	52	59	0	7

Note: *Coronaviruses were identified through CAP-certified PCR method, Ref©: reference assays-culture and/or RT-PCR/PCR positive.

doi:10.1371/journal.pone.0000419.t001

(Lin, et al., 2007)

Lessons from COVID



- What is an appropriate threshold for positivity?
- How do we manage the improved resolution of the outbreak for clinical decisions?
- What constitutes significant change in the genome?
- How do we manage the rapid identification and dissemination of information?
- Explaining transmissibility

(Popa et al., 2020)

(Frost, 2011)

NIH NHGRI

Monogenic Risk

- Found in ~3.2% of the general population
- Average risk significantly different than monogenic conferred risk e.g.
  - 12.9% risk of a woman in the general population
  - ~70% risk in woman with Breast Cancer (BRCA) 1 variant

Cancer Statistics, 2021

Siegel, R. L., Miller, K. D., Fuchs, H. E., & Jemal, A. (2021). Cancer Statistics, 2021. *CA: a cancer journal for clinicians*, *71*(1), 7–33. https://doi.org/10.3322/caac.21654

	BIRTH TO 49	50 TO 59	60 TO 69	70 AND OLDER	BIRTH TO DEATH
Breast					
Female	2.1 (1 in 49)	2.4 (1 in 42)	3.5 (1 in 28)	7.0 (1 in 14)	12.9 (1 in 8)

Table 4 Pharmacogenomic markers for SJS/TEN in clinical practice

Drug	Marker[a]	Result	Clinical interpretation	Clinical recommendation	High-risk ethnicities[b]	Additional remarks for positive carriers
Carbamazepine	*HLA-B*15:02*	Positive	Increased risk for SJS/TEN	Do not use carbamazepine or oxcarbazepine	Han Chinese, Thai, Malaysian, Indian, Singaporean, and Vietnamese	If the patient is carbamazepine or oxcarbazepine naive, do not use carbamazepine or oxcarbazepine, respectively. If the patient has previously used carbamazepine or oxcarbazepine for longer than 3 months without a cutaneous adverse drug reaction, continuously consider using carbamazepine or oxcarbazepine.
		Negative	Normal risk for SJS/TEN	Use carbamazepine or oxcarbazepine		
	*HLA-A*31:01*	Positive	Increased risk for SJS/TEN	Do not use carbamazepine or oxcarbazepine	Japanese, Korean, and European	If the patient is carbamazepine or oxcarbazepine naive, do not use carbamazepine or oxcarbazepine, respectively. If the patient has previously used carbamazepine or oxcarbazepine for longer than 3 months without a cutaneous adverse drug reaction, continuously consider using carbamazepine or oxcarbazepine.
		Negative	Normal risk for SJS/TEN	Use carbamazepine or oxcarbazepine		
Allopurinol	*HLA-B*58:01*	Positive	Increased risk for SJS/TEN, DRESS, and MPE	Do not use allopurinol	Asian and Caucasian	If the patient is allopurinol naive, do not use allopurinol. If the patient has previously used allopurinol for longer than 3 months without a cutaneous adverse drug reaction, continuously consider using allopurinol. A starting dose of less than 200 mg should be considered. Screening should be considered for elderly patients and patients with renal abnormal function.
		Negative	Normal risk for SJS/TEN, DRESS, and MPE	Use allopurinol		

Abbreviations: DRESS, drug reaction with eosinophilia and systemic symptoms; HLA, human leukocyte antigen; MPE, maculopapular exanthema; SJS, Stevens–Johnson syndrome; TEN, toxic epidermal necrolysis.

[a]These variants confer risk in both the heterozygous and homozygous states.

[b]The risk alleles are common in these ethnicities.

Eric D. Green[1], M… te*

There has been … sequence of the human genome was published. Opportunities … ented, as advances in genomics are harnessed to obtain robust … on of the human genome and about the genetic contributions … vision for the future of genomics research and describe the p…

Since the end of the Human Genome Project (HGP) in 2003 and the publication of a reference human genome sequence[1,2], genomics has become a mainstay of biomedical research. The scientific community's foresight in launching this ambitious project[3] is evident in the broad range of scientific advances that the HGP has enabled, as shown in Fig. 1 (see rollfold). Optimism about the potential contributions of genomics for improving human health has been fuelled by new insights about cancer[4–7], quickly. Although genomics has already begun to improve diagnostics and treatments in a few circumstances, profound improvements in the effectiveness of healthcare cannot realistically be expected for many years (Fig. 2). Achieving such progress will depend not only on research, but also on new policies, practices and other developments. We have illustrated the kinds of achievements that can be anticipated with a few examples (Box 2) where a confluence of need and opportunities should

ClinGen - Clinical Genome Resource

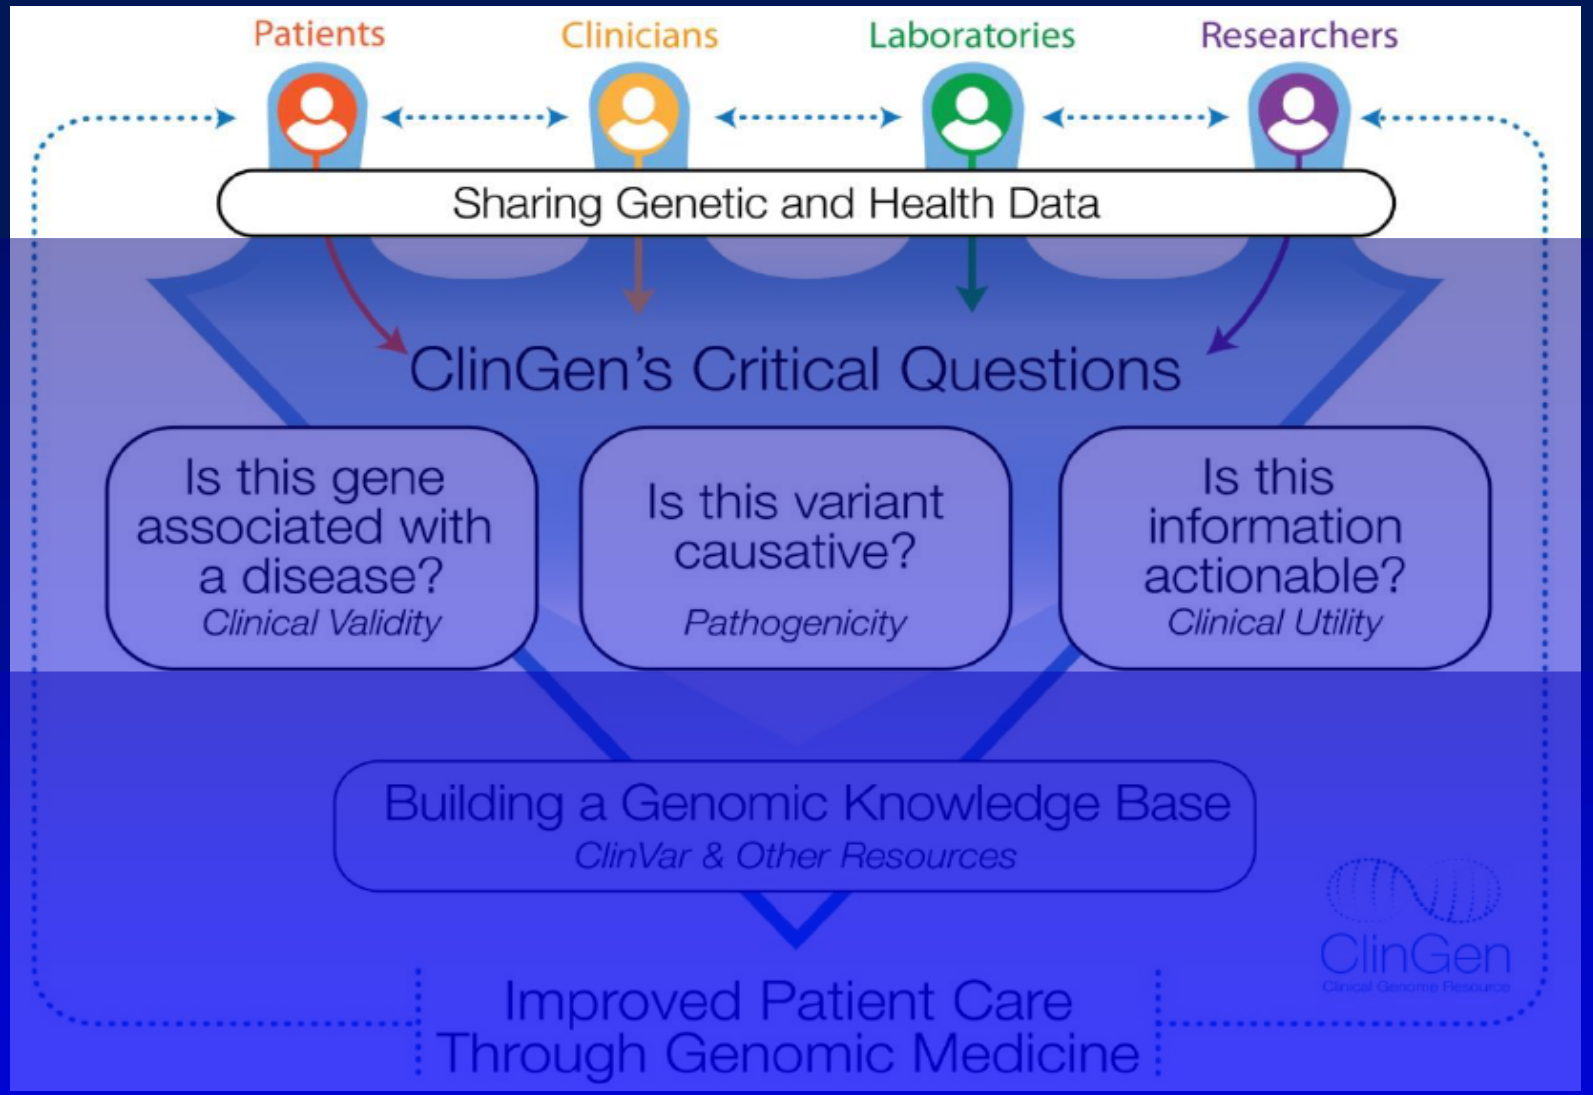
ClinGen is a National Institutes of Health (NIH)-funded resource dedicated to building an authoritative central resource that defines the clinical relevance of genes and variants for use in precision medicine and research.

ClinGen
Clinical Genome Resource

Goals

- Share genomic and phenotypic data among clinicians, researchers, and patients through centralized and federated databases for clinical and research use.
- Develop and implement standards to support clinical annotation and interpretation of genes and variants.
- Develop data standards, software infrastructure and computational approaches to enable curation at scale and facilitate integration into healthcare delivery.
- Enhance and accelerate expert review of the clinical relevance of genes and variants.
- Disseminate and integrate ClinGen knowledge and resources to the broader community.

What is the Clinical Genome Resource (ClinGen)?



NIH NHGRI

Teri Manolio

Teri Manolio

Key takeaways

- Genomics offers a way to personalize care but need to understand long-term outcomes
- Genomics can help with risk assessment, avoid adverse drug events, diagnose undiagnosed disease, and improve efficacy
- Clinicians are needed in implementation research projects to help understand impact

Many Thanks…

How to Obtain CE/CME Credits

To receive CE/CME credit, you must register by 0745 ET on 25 June 2021 to qualify for the receipt of CE/CME credit or certificate of attendance. You must complete the program posttest and evaluation before collecting your certificate. The posttest and evaluation will be available through 8 July 2021 at 2359 ET. Please complete the following steps to obtain CE/CME credit:

1. Go to URL https://www.dhaj7-cepo.com/content/jun-2021-ccss-exploring-evidence-based-practice-modern-medicine-primary-care
2. Search for your course using the **Catalog**, **Calendar**, or **Find a course** search tool.
3. Click on the REGISTER/TAKE COURSE tab.
   a. If you have previously used the CEPO CMS, click login.
   b. If you have not previously used the CEPO CMS click register to create a new account.
4. Follow the onscreen prompts to complete the post-activity assessments:
   a. Read the Accreditation Statement
   b. Complete the Evaluation
   c. Take the Posttest
5. After completing the posttest at 80% or above, your certificate will be available for print or download.
6. You can return to the site at any time in the future to print your certificate and transcripts at https://www.dhaj7-cepo.com/
7. If you require further support, please contact us at dha.ncr.j7.mbx.cepo-cms-support@mail.mil
